Education

Imperial College London – MSc Computing (Artificial Intelligence and Machine Learning) 2026 – 2027
- Courses: Deep Learning, Reinforcement Learning, Natural Language Processing, ML for imaging

University College London – BSc Computer Science (1^{st} Class, 73.9%), Minor in Mathematics 2023 – 2026
- Courses: Algorithms & Data Structures, Software Engineering, Machine Learning, Financial Mathematics

Experience

Quantitative Developer Intern, Squarepoint Capital Jun 2026 – Sep 2026
- Developed 3 custom trading add-in dashboards on the QUEST platform leveraged by 20+ traders, enhancing quantitative workflows and data visualisation
- Modularised core QUEST architecture into 6 reusable components adopted across 5 applications, cutting duplicated code by 50%
- Maintained 2–3 mission-critical production applications accessed daily by 100+ active traders, sustaining 99% uptime
- Resolved 5 high-priority production errors with an average resolution time of 30 minutes, safeguarding live execution pipelines

Software Developer Intern, Squarepoint Capital Jun 2025 – Sep 2025
- Analysed FIX message flows from 10+ counterparties on long-running applications to identify counterparty-specific enrichment logic for 15+ downstream fields
- Constructed 80+ BDD validation tests per counterparty to verify enrichment behaviour matched requirements
- Reduced a 7,000-line key-mapping table by >50% (to 3,438 lines) by removing redundant/obsolete/invalid JSON entries and enforcing schema validation in GitLab CI
- Supported 13 production releases with production teams, leveraging GitLab CI/CD pipelines, feature/release branching, and ticket-driven workflows to safely restart prod instances

Full-Stack Web Developer, Avanade - Part Time Sep 2024 – Mar 2025
- Built and deployed Dialogue Hub services within Avanade's enterprise Azure environment
- Documented architectural decisions on a companion report site following structured DevOps workflows
- Established an accessible booking platform for a café supporting people with visual/auditory impairments
- Integrated screen reader support, font-size adjustment, high-contrast mode, and dyslexia-friendly fonts, following WCAG 2.1 AA guidelines
- Enabled full voice input and command support via a conversational AI chatbot handling 10 core commands

Research

Machine Learning–Driven Content Generation and Adaptation in Video Games Sep 2025 – May 2026
- Applied Phase-Preserving Diffusion to generate 5 in-game assets from player traits and base templates in 5 s each
- Integrated a context-aware LLM commentator reacting to live game state and events with 25 ms average latency
- Built dynamic difficulty adjustment from 10 gameplay metrics, improving preference by 70% across 15 playtesters

Performance Evaluation and Comparative Analysis of Convex Hull Algorithms Jan 2024 – Mar 2024
- Benchmarked 3 convex hull algorithms (Graham scan, Jarvis march, Quickhull) on synthetic sets

Classifying Knee X-Rays into Categories of Knee Osteoarthritis (TensorFlow, Python) Sep 2021 – Apr 2022
- Completed interdisciplinary research program with a grade of 92.5/100, top 10% of cohort
- Trained a CNN on 2000 X-ray images to classify knee osteoarthritis into 3 severity classes

Certifications & Courses

IBM - Getting started with AI & Agile Explorer & Design Thinking, IBM-SkillsBuild Oct 2024
J.P. Morgan Software Engineering Virtual Experience, Forage Jan 2024
Imperial - Mathematics for Machine Learning Specialisation, Coursera Sep 2022
